BALBOA | CORP

Move Goods.
Move Money.
Settle Trade.

USD-backed settlement infrastructure for importers and exporters that need to pay international suppliers, receive commercial payments, and move value across multiple counterparties and jurisdictions.

BALBOA1 FOR IMPORT & EXPORT OPERATIONS · 2026

BALBOA | CORP + BALBOA1

Settlement infrastructure built for international trade.

What is BALBOA | CORP?

A Panama-based settlement infrastructure company focused on international trade, logistics, import/export, and cross-border commercial operations. It connects commercial execution and financial settlement, with compliance integrated into the process.

What is BALBOA1?

A USD-backed digital settlement asset for verified businesses and approved commercial flows. Designed to settle commercial obligations, not to speculate.

Operational settlement lifecycle

01

Verified Access

Payer and beneficiary complete KYC/KYB.

02

Commercial Obligation

Approved supplier invoice, purchase order, logistics invoice, service invoice, or trade-related obligation.

03

Origination

Commercial settlement is originated.

04

Disbursement

BALBOA1 moves to the beneficiary.

05

Execution

Hold, reuse within the approved network, or redeem to USD.

The token is the tool. Trade settlement is the business.

BUILT FOR INTERNATIONAL TRADE

Pay the supply chain.
Receive from the market.

The same company can be a payer in one transaction and a beneficiary in another.

PAYER

- International suppliers, manufacturers, producers
- Freight forwarders, logistics providers, shipping companies
- Customs brokers, commercial agents
- Warehouses, distribution partners
- Inspection / certification providers and other approved trade counterparties

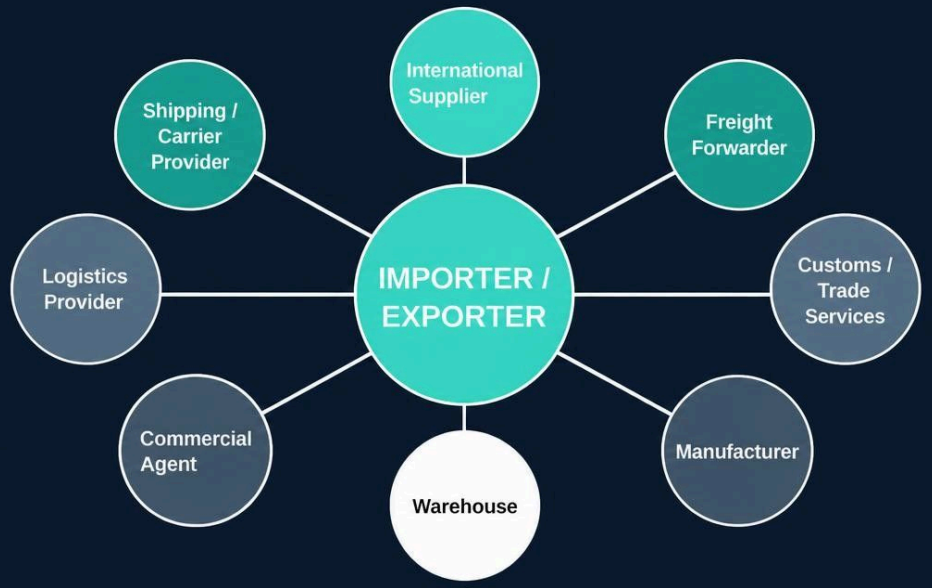

PAYEE

- Overseas buyers, international distributors, wholesalers
- Retail groups, trading companies, importers
- Commercial customers, regional buyers, international counterparties

One company can receive from buyers and reuse the same settlement balance to pay suppliers.

One shipment can involve multiple separate payments.

A shipment spans several commercial obligations across counterparties and jurisdictions: foreign supplier invoices, manufacturer payments, freight, logistics, customs brokerage, warehousing, inspection, distribution costs, commercial agents.

BALBOA1 adds a settlement layer for approved commercial obligations. It does not handle customs duties, taxes, tariffs, or regulatory payments.

PAYABLES

Fund once.
Settle multiple trade obligations.

Instead of treating each supplier invoice or trade expense as an isolated cross-border payment, the company keeps an operational settlement balance and uses it across approved counterparties.

01

Treasury

Importer / Exporter Treasury

→ Approved Funding Flow

02

Settlement Balance

BALBOA1

Balance

03

Approved Counterparties

- International Supplier
- Manufacturer
- Freight Forwarder
- Logistics Provider
- Commercial Agent
- Warehouse / Service Provider

OPERATIONAL CONTROL

One settlement infrastructure for multiple commercial obligations.

VISIBILITY

Clear confirmations and transaction records across trade payments.

FLEXIBILITY

Use the balance across approved counterparties as needs arise.

RECEIVABLES

Receive from overseas buyers, then put the balance back to work.

Overseas Buyer / Distributor / Commercial Customer

→ Pays commercial invoice

BALBOA1

→

Importer / Exporter / Trading Company

Redeem

Convert to USD through the approved redemption process.

Hold

Maintain the settlement balance temporarily.

Reuse

Pay another approved commercial counterparty.

Example: an overseas buyer pays an exporter in BALBOA1. The exporter uses part of it to pay an approved manufacturer, freight forwarder, or supplier; the rest is held or redeemed to USD.

Commercial value does not necessarily have to stop after one transaction. Receivables become usable working settlement capital.

From one payment to an operating trade settlement network.

Importers and exporters constantly alternate between paying and receiving. Payment received from an overseas customer today can fund a manufacturer, supplier, or freight forwarder tomorrow. Approved participants move USD-backed commercial value through a verified trade network, not isolated payments.

The Network Receive → Reuse → Pay → Settle → Redeem

THE OPERATIONAL PROBLEM

Global trade moves continuously. Traditional payment processes do not.

BALBOA1 adds a settlement layer designed around the commercial operation rather than around an isolated bank transfer.

MULTIPLE COUNTERPARTIES

Suppliers, manufacturers, carriers, forwarders, agents, and buyers across jurisdictions; each relationship adds a payment, reconciliation process, and dependency.

PAYMENT TIMING & CUTOFFS

Shipments and production cross time zones; requirements do not always align with bank cutoffs, weekends, intermediary or correspondent timelines.

RECONCILIATION GAPS

Finance, procurement, sales, and logistics need records of who was paid, who paid, which invoice, the commercial purpose, and when.

CROSS-BORDER COMPLEXITY

Coordinating multiple banks, jurisdictions, and processes creates friction between commercial transaction and financial settlement.

BALBOA1 · INSTITUTIONAL SETTLEMENT INFRASTRUCTURE

USD-backed. Business-only. Compliance-gated.

Commercial infrastructure for executing verified trade settlements, not a speculative crypto product.

USD-BACKED

Commercial settlement value

Each BALBOA1 represents USD-backed commercial settlement value.

VERIFIED PARTICIPANTS

Approved commercial flows

KYC/KYB required; commercial flows subject to approval.

TRACEABLE

Operational visibility

Clear records for operational, treasury, and compliance visibility.

- Designed for B2B settlement
- Not intended for speculative trading
- Participants operate through approved commercial flows
- Hold, reuse, or redeem according to the approved process

NEXT STEPS

Start with one real trade operation.

One order. One obligation. One settlement.

01

Identify Flow

One real flow, such as a foreign supplier invoice, manufacturer payment, export receivable, freight / logistics invoice, distributor payment, or approved cross-border obligation.

02

Verify Parties

Standard KYC/KYB for payer and beneficiary; validate the commercial flow.

03

Execute Live

One controlled commercial settlement through BALBOA1.

04

Measure & Scale

Settlement process, reconciliation, visibility, treasury workflow, payer and beneficiary experience, operational fit.

If the first transaction works, expand to more buyers, suppliers, shipments, and trade corridors.
